

The six core elements of cybersecurity

Govern · Identify · Protect · Detect · Respond · Recover

These core elements work together to strengthen cyber resilience, reduce risk, and help organisations to operate with confidence. Each stage of the lifecycle represents a different aspect of cyber resilience. Some services sit firmly within one stage, while others support multiple areas. Many services are included within our totalIT packages, while others are available as standalone solutions. We can help you prioritise the areas that will deliver the greatest risk reduction and business value for your organisation.

	Govern	Identify	Protect	Detect	Respond	Recover
Included in: totalIT essentials totalIT secure totalIT premium		Compliance checks ramsac Cyber Resilience Certification (CRC)	OS & Firmware Patching			
Included in: totalIT secure totalIT premium		ramsac VMaaS (Vulnerability Management as a Service)	Cybersecurity awareness & phishing training	Managed Endpoint Detection & Response (MDR) Security Information and Event Management (SIEM) Identity Threat Detection & Response (ITDR)		
Included in: totalIT premium	Information security policy review ISO27001 Gap analysis	Cyber Essentials basic gap analysis	Board cybersecurity awareness training			
Standalone solutions	Information security policy writing Board cyber strategy assistance ISO27001 consultancy	Cyber Essentials Plus Penetration testing	Board incident simulation training			Business Continuity Plan (BCP) writing Disaster Recover (DR) plan writing Incident Response Plan (IRP) writing

Your Technology. Our Responsibility.
