

An organisation experiencing a cyber breach is not a question of 'If' but 'When'. How you respond in the immediate aftermath of having a cyber incident could go a long way in determining the impact of the incident on your business. Without a breach response plan (BRP) an attack may go undetected, organisations may not know how to contain the attack, respond, mitigate, clean up and investigate the cause of the attack.

What is a breach response plan?

A breach response plan is a set of documented procedures and policies that outline how an organisation will respond to data breaches, data leaks, cyber-attacks. A well-defined breach response plan can help your organisation mitigate the effects of an incident, minimise the risk of further damage, and reduce recovery time.

A breach response plan also gives guidance on what employees should do when they notice anything suspicious or click on a suspicious link. Such timely actions can help to prevent a cyber incident from escalating. Accurate planning here is vital, as while timely actions are critical to preventing a cyber incident from escalating, certain actions may impact your Cyber Insurance policy.

Breach Response Plan: How can ramsac help?

ramsac can help you through the process of defining, writing and testing a breach response plan to ensure that it reflects your current capabilities of responding to and recovering from data breaches, data leaks and cyber attacks. ramsac can help you build an action plan that has clear instructions of what employees and the cyber incident response team need to do when a cyber incident happens.

Apart from the technical response to an incident, you still need to communicate with internal and external stakeholders such as customers, law enforcement and regulatory bodies informing them of an attack. ramsac can help you define this process for communicating with relevant stakeholders.

Cybersecurity consultancy from ramsac

Utilising over 30 years experience supporting customers with their IT issues, our cybersecurity consultants can help protect your organisation against cybercrime. ramsac's cybersecurity consultancy includes;
