

What is cybersecurity consultancy?

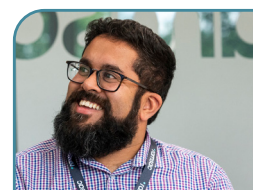

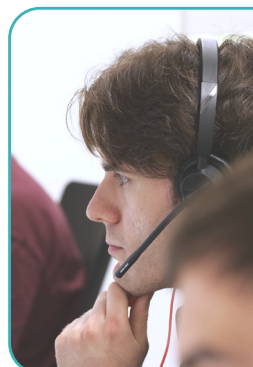

Cybersecurity is not only a technical issue it is a business imperative. Organisations must prioritise cybersecurity to protect its assets, customers, employees and stakeholders from cyber threats. The cyber threat landscape is constantly evolving and becoming more sophisticated. Cybersecurity consultancy can help an organisation to establish and implement policies, standards, procedures, and controls that protect the organisation from cybersecurity breaches.

How ramsac can help

Utilising over 30 years experience of supporting organisations with their IT and cybersecurity, ramsac provide strategic consultancy services on all aspects of cybersecurity, including risk, best practices, standards, and awareness. We help our clients protect themselves from cyberattacks, reducing their impact, cost, and recovery time in the event of a breach, whilst improving their resilience and risk level to prevent breaches from occurring.

ramsac's cybersecurity consultancy services include;

- ✓ Information security policy review
- ✓ Information security policy writing
- ✓ Breach response plan (BRP)
- ✓ Cyber audit
- ✓ ISO27001 consultancy
- ✓ General compliance queries

Cybersecurity consultancy from ramsac

Information security policy review

Humans are usually the weakest point of an organisation's defence against security breaches. It is important therefore for employees to have clear guidance on how to protect the organisation's data. Through extensive information gathering, ramsac's cybersecurity consultants can provide an in-depth review of an organisation's IT security policy to highlight areas for improvement.

Information security policy writing

Writing a security policy can be quite time consuming and daunting. Many organisations end up writing, or generating through AI, a generic policy that does not capture their approach to security and doesn't provide proper security guidance for employees. Our cybersecurity consultants can write a jargon free security policy that reflects an organisation's approach to security.

Breach response plan

A BRP is a plan for handling cyber breaches, It reduces the damage of a breach by instructing employees what to do during a cybersecurity incident. Our cybersecurity consultants help organisations to create, write, and test comprehensive breach response plans.

Cyber Audit

A cyber security audit is an extensive and comprehensive review of an organisation's IT estate, policies, and procedures to identify vulnerabilities that could lead to a data breach. Our cybersecurity consultants can perform an audit to check that an organisation's IT systems and processes satisfy compliance requirements with applicable laws and regulations.

ISO 27001 consultancy

ISO 27001 certification demonstrates a strong commitment to information security. ramsac supports organisations through every stage, carrying out gap analyses and internal audits, helping to build your Information Security Management System (ISMS), and providing clear, tailored guidance. We help reduce risk, ensure compliance, and embed a security-focused culture that aligns with your business goals.

General compliance queries

Cybersecurity is a huge, complicated field, but ramsac are here to help. Whether that is helping to review cyber insurance products, knowing how to respond to audits and new regulatory requirements, or identifying Supplier and Supply Chain risks across your partners, we would be happy to assist.

Your Technology. Our Responsibility.
